

# Contents

<b>Preface</b>	<b>11</b>
<b>1 Background and Overview</b>	<b>15</b>
1.1 Euclidean geometry . . . . .	15
1.2 Perspective . . . . .	15
1.3 Projective geometry . . . . .	16
1.4 Photogrammetry . . . . .	17
1.5 Computer vision . . . . .	18
<b>I Representations</b>	<b>19</b>
<b>2 Introduction</b>	<b>21</b>
2.1 Cartesian representations . . . . .	21
2.2 Points in $\mathbb{E}^2$ . . . . .	22
2.3 Lines in $\mathbb{E}^2$ . . . . .	22
2.4 Points, planes and lines in $\mathbb{E}^3$ . . . . .	24
2.5 Basic geometric operations . . . . .	26
2.5.1 The line that intersects two points in $\mathbb{E}^2$ . . . . .	26
2.5.2 The point of intersection between two lines in $\mathbb{E}^2$ . . . . .	27
2.5.3 Distance between a point and a line in $\mathbb{E}^2$ . . . . .	27
2.6 Concluding remarks . . . . .	28
<b>3 Homogeneous Representations in 2D</b>	<b>29</b>
3.1 Homogeneous coordinates of 2D points . . . . .	29
3.1.1 P-normalization . . . . .	30
3.2 Dual homogeneous coordinates of 2D lines . . . . .	32
3.2.1 D-normalization . . . . .	33
3.3 Relations between points and lines . . . . .	34
3.3.1 The line that intersects two points . . . . .	34
3.3.2 The point of intersection between two lines . . . . .	35
3.3.3 Points on a line, or not . . . . .	35
3.3.4 Lines through a point, or not . . . . .	37
3.4 Operations on normalized homogeneous coordinates . . . . .	37
3.4.1 Distance between two points . . . . .	38
3.4.2 Distance between a point and a line . . . . .	38
3.4.3 Area of a triangle . . . . .	40
3.4.4 Concluding remarks . . . . .	42
3.5 Points and lines at infinity . . . . .	42
3.5.1 Points at infinity . . . . .	43
3.5.2 The line at infinity . . . . .	45
3.5.3 Projective geometry and the projective plane . . . . .	46
3.6 Parametric representations of lines . . . . .	47

3.7	Plücker coordinates . . . . .	48
3.8	The duality principle in the projective plane . . . . .	49
<b>4</b>	<b>Transformations in 2D</b>	<b>51</b>
4.1	How to characterize a transformation . . . . .	51
4.1.1	Degrees of freedom . . . . .	51
4.2	Rigid transformations . . . . .	52
4.3	Similarity transformations . . . . .	56
4.4	Affine transformations . . . . .	57
4.4.1	Non-uniform scaling . . . . .	58
4.4.2	Reflection . . . . .	58
4.4.3	Shearing . . . . .	60
4.4.4	Decomposition of an affine transformation . . . . .	61
4.5	Dual transformations . . . . .	61
4.5.1	Geometric characterization of affine transformations . . . . .	62
4.6	Projections . . . . .	63
4.7	Concluding remarks . . . . .	64
<b>5</b>	<b>Homogeneous Representations in 3D</b>	<b>65</b>
5.1	Homogeneous coordinates of 3D points . . . . .	65
5.2	Dual homogeneous coordinates of 3D planes . . . . .	66
5.2.1	Parametric representation of a plane . . . . .	67
5.3	Homogeneous representations of 3D lines . . . . .	68
5.3.1	Parametric representation of a 3D line . . . . .	68
5.3.2	Plücker coordinates of 3D lines . . . . .	69
5.3.3	L-normalization . . . . .	69
5.3.4	Dual Plücker coordinates . . . . .	71
5.3.5	The duality mapping . . . . .	72
5.3.6	Internal constraint and degrees of freedom . . . . .	72
5.3.7	DL-normalization . . . . .	73
5.4	Incidence relations between points, planes, and lines . . . . .	73
5.4.1	The intersection of a line with a plane . . . . .	74
5.4.2	The plane that intersects a line and a point . . . . .	74
5.4.3	The point that intersects three planes . . . . .	75
5.4.4	The plane that intersects three points . . . . .	76
5.4.5	Points on a plane, or not . . . . .	77
5.4.6	Planes through a point, or not . . . . .	78
5.4.7	The intersection of two lines . . . . .	78
5.5	Distances . . . . .	79
5.5.1	Distance between two points . . . . .	79
5.5.2	Signed distance between a point and a plane . . . . .	79
5.5.3	Distance between a point and a line . . . . .	79
5.6	The duality principle in $\mathbb{E}^3$ . . . . .	80
<b>6</b>	<b>Transformations in 3D</b>	<b>81</b>
6.1	Degrees of freedom . . . . .	81
6.2	Rigid transformations . . . . .	81
6.3	Similarity transformations . . . . .	82
6.4	Affine transformations . . . . .	82
6.5	Dual transformations . . . . .	84
6.6	Line transformations . . . . .	84

<b>7 Homographies</b>	<b>85</b>
7.1 Homographies in 2D . . . . .	85
7.1.1 Applications of homographies . . . . .	88
7.1.2 Points at infinity revisited . . . . .	88
7.2 Homographies in 3D . . . . .	90
7.3 Canonical homogeneous coordinates . . . . .	90
7.3.1 Canonical homogeneous coordinates in 2D . . . . .	90
7.3.2 Canonical homogeneous coordinates in 3D . . . . .	91
7.3.3 Concluding remarks . . . . .	91
<b>8 The Pinhole Camera</b>	<b>93</b>
8.1 Central projection . . . . .	93
8.1.1 Camera obscura . . . . .	95
8.2 Camera centered coordinate systems . . . . .	96
8.2.1 The normalized camera . . . . .	99
8.3 The general pinhole camera . . . . .	103
8.3.1 Camera transformations . . . . .	104
8.3.2 The camera at infinity . . . . .	105
8.3.3 Internal and external camera parameters . . . . .	106
8.3.4 Camera resectioning . . . . .	108
8.4 The digital image . . . . .	110
8.5 The geometry of a pinhole camera . . . . .	114
8.5.1 Projection lines . . . . .	114
8.5.2 Equivalent cameras . . . . .	115
8.5.3 Images of a plane . . . . .	116
8.5.4 The image of a line . . . . .	117
8.5.5 Projection planes . . . . .	119
8.5.6 Camera projection constraints . . . . .	119
8.5.7 Geometric interpretation of $\mathbf{C}$ . . . . .	120
8.5.8 Field of view . . . . .	121
<b>9 Epipolar Geometry</b>	<b>123</b>
9.1 Stereo cameras . . . . .	125
9.1.1 Epipolar points . . . . .	125
9.1.2 Epipolar lines . . . . .	126
9.1.3 Epipolar planes . . . . .	126
9.2 The fundamental matrix . . . . .	128
9.2.1 The epipolar constraint . . . . .	128
9.2.2 The fundamental matrix . . . . .	128
9.2.3 Symmetry . . . . .	129
9.2.4 Transfer . . . . .	130
9.3 Invariance to homography transformations of 3D space . . . . .	131
9.3.1 Transformations of the image coordinates . . . . .	131
9.3.2 Parameterization of $\mathbf{F}$ . . . . .	132
9.3.3 Camera matrices from $\mathbf{F}$ . . . . .	132
9.3.4 Summary of properties related to $\mathbf{F}$ . . . . .	134
9.3.5 The epipolar constraint in practice . . . . .	135
9.4 Triangulation . . . . .	135
9.4.1 Ambiguities of the world coordinate system . . . . .	136
9.5 Stereo rectification . . . . .	137
9.5.1 Rectified stereo rig . . . . .	138
9.5.2 Rectification of stereo images . . . . .	139
9.5.3 The Loop and Zhang rectification method . . . . .	139
9.6 Calibrated epipolar geometry . . . . .	140
9.6.1 Normalized stereo cameras . . . . .	140

9.6.2	The essential matrix . . . . .	141
9.6.3	Camera poses from $\mathbf{E}$ . . . . .	142
9.6.4	Transformations of the image coordinates . . . . .	144
9.6.5	Minimal parameterization of $\mathbf{E}$ . . . . .	145
9.6.6	Summary of properties related to $\mathbf{E}$ . . . . .	145
<b>10</b>	<b>Representations of 3D Rotations</b>	<b>147</b>
10.1	Rotation matrices . . . . .	148
10.1.1	Representations of $SO(3)$ . . . . .	149
10.2	Axis-angle representation . . . . .	150
10.2.1	Rodrigues' rotation formula . . . . .	151
10.2.2	Axis-angle from $SO(3)$ . . . . .	153
10.2.3	Summary . . . . .	154
10.3	$so(3)$ . . . . .	154
10.3.1	Using the matrix exponential function . . . . .	154
10.3.2	The Cayley transform . . . . .	156
10.3.3	Summary . . . . .	157
10.4	Unit quaternions . . . . .	158
10.4.1	The quaternionic embedding of $SO(3)$ . . . . .	159
10.4.2	$\mathbf{R}$ from unit quaternion . . . . .	160
10.4.3	Unit quaternion from $\mathbf{R}$ . . . . .	160
10.4.4	Relation to the Cayley representation . . . . .	161
10.4.5	Summary . . . . .	162
10.5	Three-angle representations . . . . .	162
10.5.1	Finding the Euler angles for $\mathbf{R}$ . . . . .	163
10.5.2	Summary . . . . .	164
10.6	Which representation do I choose? . . . . .	165
10.7	Related topics . . . . .	166
10.7.1	Twisted rotations . . . . .	166
10.7.2	Gimbal lock . . . . .	169

## II Estimation 171

<b>11</b>	<b>Introduction to Estimation in Geometry</b>	<b>173</b>
11.1	Least squares formulation . . . . .	173
11.2	Total least squares formulation . . . . .	176
11.3	What causes the errors? (Part I) . . . . .	178
11.3.1	Measurement errors . . . . .	178
11.3.2	Model errors . . . . .	181
11.3.3	Outliers and inliers . . . . .	183
11.4	Geometric errors . . . . .	183
11.4.1	Examples of geometric errors . . . . .	184
11.4.2	Before we continue . . . . .	188
11.5	Algebraic errors . . . . .	188
11.5.1	Introductory example . . . . .	188
11.5.2	Model parameters, data matrix and residual . . . . .	189
11.5.3	Internal constraints . . . . .	189
11.5.4	The size of $\mathbf{A}$ . . . . .	190
11.5.5	General solution strategy for the over-determined case . . . . .	192
11.5.6	The inhomogeneous method . . . . .	193
11.5.7	The homogeneous method . . . . .	195
11.6	Probability based estimation . . . . .	197
11.6.1	Back to points and a line . . . . .	197
11.6.2	Maximum a posteriori estimation . . . . .	199

11.6.3 Maximum likelihood estimation . . . . .	200
<b>12 Estimation of Transformations</b>	<b>203</b>
12.1 Homography estimation . . . . .	203
12.1.1 Geometric errors . . . . .	203
12.1.2 Direct Linear Transformation (DLT) . . . . .	204
12.1.3 The correspondence problem . . . . .	206
12.1.4 Minimal case estimation . . . . .	208
12.1.5 Degeneracies . . . . .	209
12.2 The homogeneous method revisited . . . . .	210
12.2.1 SVD profile . . . . .	210
12.2.2 Data normalization . . . . .	212
12.2.3 SVD profile, again . . . . .	219
12.2.4 Closing remarks . . . . .	221
12.3 Camera matrix estimation . . . . .	223
<b>13 Non-linear Estimation</b>	<b>225</b>
13.1 Non-linear estimation techniques . . . . .	225
13.1.1 Initial solutions . . . . .	226
13.1.2 Parameterizations . . . . .	226
13.2 Re-parameterization . . . . .	229
13.2.1 An example . . . . .	230
13.3 The residual . . . . .	231
13.3.1 Re-mapping of the residual . . . . .	231
13.3.2 Choosing residual . . . . .	232
13.4 An example: estimation of a line . . . . .	234
13.4.1 Using a homogeneous representation as parameters . . . . .	235
13.4.2 Minimal parameterizations . . . . .	236
13.5 An example: estimation of a homography . . . . .	238
<b>14 Estimation Involving Rotations</b>	<b>241</b>
14.1 Estimation of 3D rotations . . . . .	242
14.1.1 Using OPP . . . . .	242
14.1.2 Using SOPP . . . . .	243
14.1.3 Using quaternions . . . . .	243
14.1.4 OK, so which algorithm do I choose? . . . . .	244
14.2 Estimation of rigid transformations . . . . .	245
14.2.1 Iterative Closest Point (ICP) . . . . .	246
14.3 Non-linear least squares estimation involving rotations . . . . .	247
14.3.1 Quaternions . . . . .	248
14.3.2 Axis-angle representation . . . . .	249
14.3.3 Euler angles . . . . .	251
14.4 The Perspective $n$ -Point Problem (PnP) . . . . .	251
14.4.1 Algebraic estimation . . . . .	252
14.4.2 Geometric minimization . . . . .	253
14.4.3 Minimal case estimation (P3P) . . . . .	254
<b>15 Estimation of Epipolar Geometry</b>	<b>255</b>
15.1 Triangulation . . . . .	255
15.1.1 The mid-point method . . . . .	255
15.1.2 Algebraic methods . . . . .	257
15.1.3 Optimal triangulation . . . . .	257
15.1.4 Closing remarks . . . . .	260
15.2 Estimation of $\mathbf{F}$ . . . . .	262
15.2.1 The 8-point algorithm . . . . .	262

15.2.2	The 7-point algorithm . . . . .	264
15.2.3	Degeneracies . . . . .	266
15.2.4	Minimization of geometric errors . . . . .	267
15.3	Estimation of $\mathbf{E}$ . . . . .	269
15.3.1	Algebraic estimation . . . . .	269
15.3.2	Minimal case estimation of $\mathbf{E}$ . . . . .	270
<b>16</b>	<b>Robust Estimation</b>	<b>271</b>
16.1	What causes the errors? (Part II) . . . . .	272
16.1.1	Inliers and outliers . . . . .	272
16.2	Robust errors . . . . .	273
16.3	RANSAC . . . . .	274
16.3.1	An indeterministic approach . . . . .	275
16.3.2	Robust estimation of a 2D line . . . . .	276
16.3.3	Probabilities and number of trials . . . . .	278
16.3.4	Variants of the basic RANSAC algorithm . . . . .	278
16.4	Revisiting the correspondence problem . . . . .	279
16.4.1	RANSAC and the correspondence problem . . . . .	279
16.4.2	Preprocessing of data . . . . .	280
16.4.3	Closing remarks . . . . .	282
16.5	Robust estimation in practice . . . . .	282
16.5.1	Robust estimation of $\mathbf{H}$ . . . . .	282
16.5.2	Robust estimation of $\mathbf{F}$ . . . . .	283
16.5.3	Robust estimation of $\mathbf{E}$ . . . . .	284
16.5.4	Robust PnP . . . . .	286
<b>III</b>	<b>Applications</b>	<b>287</b>
<b>17</b>	<b>Camera Calibration</b>	<b>289</b>
17.1	Automatic camera calibration . . . . .	290
17.1.1	Mathematical foundation . . . . .	290
17.1.2	Geometric errors . . . . .	292
17.2	Lens distortion . . . . .	292
17.2.1	Radial lens distortion . . . . .	294
17.2.2	General distortion models . . . . .	297
17.2.3	General coordinate systems . . . . .	297
17.2.4	OK, so which distortion model do I choose? . . . . .	298
17.2.5	Calibration of lens distortion . . . . .	298
17.2.6	Compensating for the lens distortion . . . . .	299
17.3	Zhang's calibration method . . . . .	300
17.3.1	Geometric errors . . . . .	302
17.3.2	Lens distortion . . . . .	303
17.3.3	Summary . . . . .	303
<b>18</b>	<b>Image Mosaics</b>	<b>305</b>
18.1	Introduction . . . . .	305
18.2	Using homographies . . . . .	307
18.2.1	A mosaic from two images . . . . .	308
18.2.2	Blending . . . . .	312
18.2.3	A mosaic from several images . . . . .	314
18.3	Using spherical coordinates for panoramas . . . . .	316
18.3.1	A panorama from two images . . . . .	319
18.4	Further reading . . . . .	321

<b>19 Structure from Motion</b>	<b>323</b>
19.1 Simplifying assumptions . . . . .	323
19.2 Reconstruction from normalized cameras . . . . .	325
19.2.1 Accumulative reconstruction from triplets of normalized cameras . . . . .	326
19.2.2 Analysis . . . . .	327
19.3 Bundle adjustment . . . . .	327
19.4 Incremental bundle adjustment . . . . .	328
19.4.1 Bookkeeping . . . . .	329
19.4.2 Initialization and first bundle adjustment . . . . .	330
19.4.3 Adding an image . . . . .	331
19.5 Practical issues . . . . .	336
19.5.1 Parameterization of the camera poses . . . . .	336
19.5.2 Flexible scheme for adding cameras . . . . .	339
19.5.3 Image coordinate system . . . . .	339
19.5.4 The residual vector $\mathbf{r}$ . . . . .	339
19.5.5 Sparsity of $\mathbf{J}$ . . . . .	339
19.5.6 The Schur complement trick . . . . .	340
19.5.7 Scale ambiguity . . . . .	342
19.5.8 The first camera pose . . . . .	342
19.6 Further reading . . . . .	342
<b>IV Toolbox</b>	<b>343</b>
<b>A Spaces</b>	<b>345</b>
A.1 Projective spaces . . . . .	345
A.1.1 Construction of a projective space . . . . .	345
A.1.2 Operations on projective spaces . . . . .	346
A.1.3 Concluding remarks . . . . .	347
A.2 Quaternions . . . . .	348
A.2.1 Vector+scalar notation of quaternions . . . . .	349
<b>B Matrices</b>	<b>351</b>
B.1 Cross product operator . . . . .	351
B.2 Matrix pseudo-inverse . . . . .	353
B.2.1 Non-uniqueness of the matrix pseudo-inverse . . . . .	354
B.2.2 Pseudo-inverse of a transformed matrix . . . . .	354
B.3 Block matrices . . . . .	355
B.3.1 Block matrix multiplication . . . . .	355
B.3.2 Block diagonal matrix . . . . .	356
B.3.3 Inverse of a block diagonal matrix . . . . .	356
B.3.4 Blockwise matrix inverse . . . . .	356
B.4 Singular value decomposition (SVD) . . . . .	356
B.4.1 Theorem . . . . .	357
B.4.2 Relation between EVD and SVD . . . . .	358
B.4.3 Outline of existence proof . . . . .	358
B.4.4 Applications of SVD . . . . .	358
B.4.5 The orthogonal Procrustes problem . . . . .	361
B.4.6 Computation of SVD . . . . .	362
B.4.7 Special SVD (SSVD) . . . . .	363
B.5 Perturbation analysis . . . . .	363
B.5.1 The Eckart-Young theorem . . . . .	364
B.5.2 Perturbation of the eigensystem of a symmetric matrix . . . . .	364
B.6 Functions on matrices . . . . .	366
B.6.1 Matrix power . . . . .	366

B.6.2	Matrix exponential function . . . . .	366
B.6.3	Matrix logarithm . . . . .	367
B.7	Generalizations of the spectral theorem . . . . .	368
B.7.1	To $so(n)$ . . . . .	368
B.7.2	To $so(3)$ . . . . .	369
B.7.3	To $SO(n)$ . . . . .	370
B.7.4	To $SO(3)$ . . . . .	371
B.8	QR-factorization . . . . .	371
B.8.1	Special QR-factorization . . . . .	372
B.8.2	QR-factorization of $3 \times n$ matrices . . . . .	372
<b>C</b>	<b>Non-linear Optimization</b>	<b>375</b>
C.1	General methods . . . . .	376
C.1.1	Steepest descent . . . . .	376
C.1.2	Newton's method . . . . .	378
C.2	Non-linear least squares problems . . . . .	379
C.2.1	The Gauss-Newton method . . . . .	379
C.2.2	The Levenberg-Marquardt method . . . . .	380
C.2.3	Without the Hessian approximation . . . . .	381
C.3	Stop criteria . . . . .	382
C.4	OK, so which method do I choose? . . . . .	382
C.5	Practical issues . . . . .	383
C.5.1	Computing the Jacobian . . . . .	383
C.5.2	Sparse Jacobian . . . . .	384
C.5.3	Inverting $\mathbf{J}^\top \mathbf{J}$ . . . . .	384
